PROFESSIONAL SUMMARY

Full-stack software engineer and Information Technology student with hands-on experience building and scaling production products used by real customers. Strong across the full stack: React, TypeScript, Node.js, Python, REST APIs, cloud infrastructure, and applied AI. Comfortable owning features end to end, debugging production issues, and making practical architecture decisions in fast-moving team environments.

SKILLS

Frontend: React, TypeScript, JavaScript, Vite, Tailwind CSS, responsive UI
Backend: Node.js, Express, Python, Java, REST APIs, serverless functions
AI: RAG, LLM integrations, AWS Bedrock, OpenAI, document processing
Data & Infrastructure: Redis, Upstash, SQL, Docker, Vercel, AWS, caching
Engineering: Git/GitHub, authentication, testing, debugging, performance optimization
Additional: C/C++, Playwright, data pipelines, algorithms & data structures

EDUCATION

University of Central Florida (UCF) Orlando, Florida
Bachelor of Science, Information Technology. *Expected Spring 2027*
Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Computer Organization, Systems Software, Computer Security, Database Systems, Discrete Structures

EXPERIENCE

Co-Founder & Software Engineer Jul 2025 – Jul 2026
Study Guide AI Inc.

- Built and scaled MyStudyGuideAI, an AI-powered learning platform serving 1,000+ users across 20+ university courses.
- Developed product features across React/Vite/Tailwind frontends, Node/Express services, authentication, serverless infrastructure, caching, document processing, and AI integrations.
- Designed RAG workflows across approximately 200 source documents and thousands of indexed chunks, including ingestion, retrieval, context selection, and model integration.
- Resolved concurrency, authentication, and performance issues; improved reliability and cut AI infrastructure costs by more than 50%.
- Owned features from implementation through deployment and production debugging, balancing latency, reliability, and cost.

Data & Automation Engineer Jul 2025 – Oct 2025
Alpine Financial Resources

- Built automated workflows processing 20,000+ records from multiple sources, including validation, normalization, and reporting.
- Reduced manual work by more than 60% through automation and improved repeatability of data-processing tasks.
- Built practical tools around financial and behavioral datasets while troubleshooting integration and data-quality issues.

PROJECTS

Outsmart AI Sep 2025 – Aug 2026
Full-Stack Product Development

- Built and iterated on web and mobile product experiences spanning 100+ levels, progression systems, rewards, store functionality, and thousands of avatar combinations.

RipplePoint Task Manager Jun 2026 – Jun 2026
Angular, .NET 8, SQL Server, Docker

- Built a containerized full-stack app with REST APIs, validated CRUD workflows, database migrations, and repeatable deployment.

Plagiarism Detection System May 2023 – Aug 2023
Python

- Engineered a text analysis system achieving approximately 92% detection accuracy across evaluated documents.
